The final will be given Fri., 7/18, from 1:00 - 3:00 p.m. in the lab.

It will cover material presented in class through and including 7/14 and the following chapters and sections from the book:

- Chapters 1-6
- Sections 7 A and B
- Chapters 9, 12-16

The final will be cumulative, but most of it will be on material covered since the midterm. There will be one or more questions on material covered before the midterm that did not appear on the midterm (such as chi square tests, McNemar’s test, odds ratios, and relative risks).

The final will consist of 5-8 short computer problems and a few questions that can be answered in a sentence or two.

It will be open-book, open-notes, open-everything (except other students).
