• Midterm 3 will be given Wed. 4/29 in class.

• It will cover the following portions of the textbook:
  – Chapters 19, 20, 21, 22, 23, 25

• It will cover most lecture and lab material presented through 4/22.

• It will not include regression or nonparametric tests.

• Questions will be mostly short answer and multiple choice. Some will involve interpreting SAS output that I will provide.

• You may bring:
  – one 8-1/2 x 11 sheet of paper with your own notes.
  – the normal and chi square tables from your textbook
  – a calculator

• Practice problems have been posted.

• Short answer questions and interpretation of computer output will be similar in style to homework problems. Doing unassigned textbook problems would be an excellent way to prepare for the exam.
