ABOUT:

This program is aimed at 8th-10th grade students. However, everyone is welcome to attend. We will meet once a week to learn and discuss a fundamental yet simple math concept and work on related problems. Advanced students will be guided to study for IMO. There are no major pre-requisites. The emphasis will be on learning to think deeply about elementary math problems rather than just memorizing formulas. Gradually, you will learn new techniques that help you build a strong foundation in math. Please register to receive more information and news.
