Course Description

This course is designed to build up a foundation for B.S. and M.S. students in Actuarial Science. It covers two separate parts:

1. Probability Models
   In the first part, after reviewing some basics in probability theory including conditional probability, conditional expectation, we shall review and learn a bit more advanced topics including Markov chains, the exponential distribution, and the Poisson process. These will be important for you to take various future courses in Actuarial Science. They are specifically required by SOA Exam MLC (Models for Life Contingencies) and CAS Exam S (Statistics and Probabilistic Models).

2. Preparation for Life Contingencies
   In the second part, we shall develop a probabilistic framework that is crucial to valuing contingent cash flows required in SOA Exam MLC (Models for Life Contingencies). Topics include survival models, life tables, and insurance benefits. These topics will prepare you to take the two follow-up courses in life contingencies.

Textbooks

  Chapter 3: Conditional Probability and Conditional Expectation
  Chapter 4: Markov Chains
  Chapter 5: The Exponential Distribution and the Poisson Process
Evaluation System

Everyone needs to be aware that absence from classes without a reason can affect the final grade. You will find that problems from the textbook and the past SOA exams are useful in preparing for exams of this course. You are to use a CAS/SOA approved calculator during all exams of this course.

1. Homework: 15%

Normally, I assign the questions every Monday and ask you to hand in your solutions at the beginning of the class on the following Monday. You are always welcome to discuss homework problems with me during my office hours or by appointment. You are also encouraged to discuss homework problems with other students. However, what you hand in must ultimately be your own work.

2. Midterm: 40%

It is a closed-book exam consisting of short-answer type questions. The schedule of this midterm is: 6:30-8:30 PM on Tuesday, October 9, 2018, in Room 140 SH

3. Final: 45%

Similar to the midterm, the final exam is closed-book and consists of short-answer type questions. Its schedule will be announced later by the Registrar.

4. Grading

Tentatively, the final grade will be assigned according to

\[
\begin{array}{|c|c|c|}
\hline
\text{Grade} & \text{Score} \\
\hline
\text{F} & [0, 40) \\
\text{D-} & [40, 45) \\
\text{D} & [45, 50) \\
\text{D+} & [50, 55) \\
\text{C-} & [55, 60) \\
\text{C} & [60, 65) \\
\text{C+} & [65, 70) \\
\text{B-} & [70, 75) \\
\text{B} & [75, 80) \\
\text{B+} & [80, 85) \\
\text{A-} & [85, 90) \\
\text{A} & [90, 95) \\
\text{A+} & [95, 100] \\
\hline
\end{array}
\]

This is not an absolute scale and may be slightly adjusted depending on the situation.
