How to submit your work for grading

Teodor Rus

September 4, 2010

The rules you need to follow in order to submit your work for grading are:

1. Login to a Linux machine using your Linux account. Then copy all files you want to submit into a directory named Work. You need to create the directory "Work" in the same directory where the files to submit are located using the following the command:

   ```
   mkdir Work
   ```

   Note: Work can be any name you chose, such as Assign1, Project1, or any other name. I am asking you to use your login Id capitalizing its first letter. For example, if your login Id is john then the Work directory should be John. Once you have created the directory Work as shown above then you need to copy all files that you want to submit in the directory Work. Assuming that your login is john and that you want to submit the files `readme.txt, myFirstC.c, text1.txt, text2.txt` you need to do:

   ```
   mkdir John
   cp readme.txt John/readme.txt
   cp myFirstC.c John/myFirstC.c
   cp text1.txt John/text1.txt
   cp text2.txt John/text2.txt
   ```

2. Put all information in the directory Work on one single file, say `work.tar` and then change access rights to `work.tar` such that it can be read/write/execute by the grader. You do this by typing the following command:

   ```
   tar -cf work.tar Work
   chmod go+rwx work.tar
   ```

   Note: I named this file `work.tar` for easy identification. But I am asking you to use as the name `work.tar` your unique login Id for the Linux machine. For example, if your login Id is john then the `work.tar` would be `john.tar` and would be created by the command:

   ```
   tar -cf john.tar John
   chmod go+rwx john.tar
   ```

3. Copy the file `work.tar` in the class directory `/group/class/c_113/Assigns`, if you are submitting an assignment for grading, or in the directory `/group/class/c_113/Projects`, if you are submitting a project for grading. Using the example when your login Id is john, you do this

by typing: cp john.tar /group/class/c_113/Assigns/john.tar when you submit an assignment, and by typing cp john.tar /group/class/c_113/Projects/john.tar when you submit a project.

Note: I simplified the target of the `work.tar` file to be always either Assigns, when you are submitting an assignment, or Projects, when you are submitting a project.
