The Seminar on Language Processing Technology offered this semester discusses topics the Model-theoretic Semantics of Natural Languages. The seminar is attended by Don Curtis and Cuong Bui, my two PhD students, and by Thomas Callahan, an undergrad that previously has taken classes with me and contemplates graduate research on natural language processing. We meet each Monday (starting 11 Feb. 2008) 11:30am–12:30am, B11, MLH.

**Topics:** In the first part (starting February 11) Bui Cuong presents selected topics from the book "From Discourse to Logic" by Hans Kamp and Uwe Reyly, Kluwer Academic Publishers, 1993. In the second part I will present the Higraphs formalism used as semantics for conceptual structuring. In the last part Don Curtis will present topics on domain dedicated software development.
