
Project 1: Data

The purpose of this project is to explore the relationship between two variables within the same Pokémon® species. In this stage, you will complete your data collection and organize it into a readable state.

Your submission should include:

A) Your graded proposal that you already made. (So I can compare your data to your plan.)

B) Optional. You may also submit an updated proposal. If you didn't receive full credit for your proposal, you should do this!

C) An Excel spreadsheet. The spreadsheet should contain all of the data you have collected. The first column should contain an ID number to reference each Pokémon® (the easiest way would be to use the numbers 1 through 20). The two variables described in your proposal should be in columns two and three. Any other data collected should be included in additional columns. You must include labels for rows and columns.

I understand that Excel may be new for many of you. That is ok! Learning how to learn a new program is a *skill* we can develop in this class. Google any questions you have, try things, and see if you can figure out Excel. Of course, if you are still having trouble, please ask your instructor for help.

Grading

If you have updated your proposal, the revised proposal will be graded using the proposal rubric and you will receive the higher of the previous and current score. Your data will be graded using the **updated proposal**.

The data is worth a total of 20 points.

15 Points are for completeness. To receive full credit, you must complete the data collection described in your proposal.

0-5 Points	Severely incomplete. Missing major components described in proposal.
6-10 Points	Somewhat incomplete, or not exactly as described in proposal.
10-15 Points	Data collection complete or very nearly complete and as described in proposal. Sufficient data has been collected on your two variables.

5 Points are for organization.

0-1 Points	Difficult to understand. Missing or unclear labels.
2-3 Points	Few or minor revisions needed.
4-5 Points	Data clear, organized and as described in proposal.
