## Project 2: Data

The purpose of this project is to explore the spawn rate of Pokémon<sup>®</sup> based on chosen conditions. In this stage, you will complete your data collection and organization.

Recall the proposal instructions: this time I have given you the data collection plan: You will record the species of Pokemon that spawn over a 30 minute period. You must repeat this collection process 4 times: 2 times for one state of your condition (daytime, sunny, with a lure, etc) and then 2 times for the other state of your condition (nighttime, windy, without a lure, etc).

Your submission should include:

A) Your graded proposal.

B) Optional: You may also submit an updated proposal. If you didn't receive full credit for your proposal, you should do this!

C) An excel spreadsheet. The spreadsheet should contain all of the data you have collected. It is up to you how this data is stored. Make sure it is easy to read/understand your excel data, both for yourself and for me!

## Grading

If you have updated your proposal, the revised proposal will be graded using the proposal rubric and you will receive the higher of the previous and current score. Your data will be graded using the **updated proposal**.

The data is worth a total of 20 points.

15 Points are for completeness. To receive full credit, you must complete the data collection described in your proposal.

0-5 Points	Severely incomplete. Missing major components described in proposal.
6-10 Points	Somewhat incomplete, or not exactly as described in proposal.
10-15 Points	Data collection complete or very nearly complete and as described in proposal. Sufficient data has been collected on your two conditions.

5 Points are for organization.

0-1 Points	Difficult to understand. Missing or unclear labels.
2-3 Points	Few or minor revisions needed.
4-5 Points	Data clear, organized and as described in proposal.
